

Skype & emergency calling

Many regulators would like to see us providing EC

This is understandable, it's their job

Our challenges

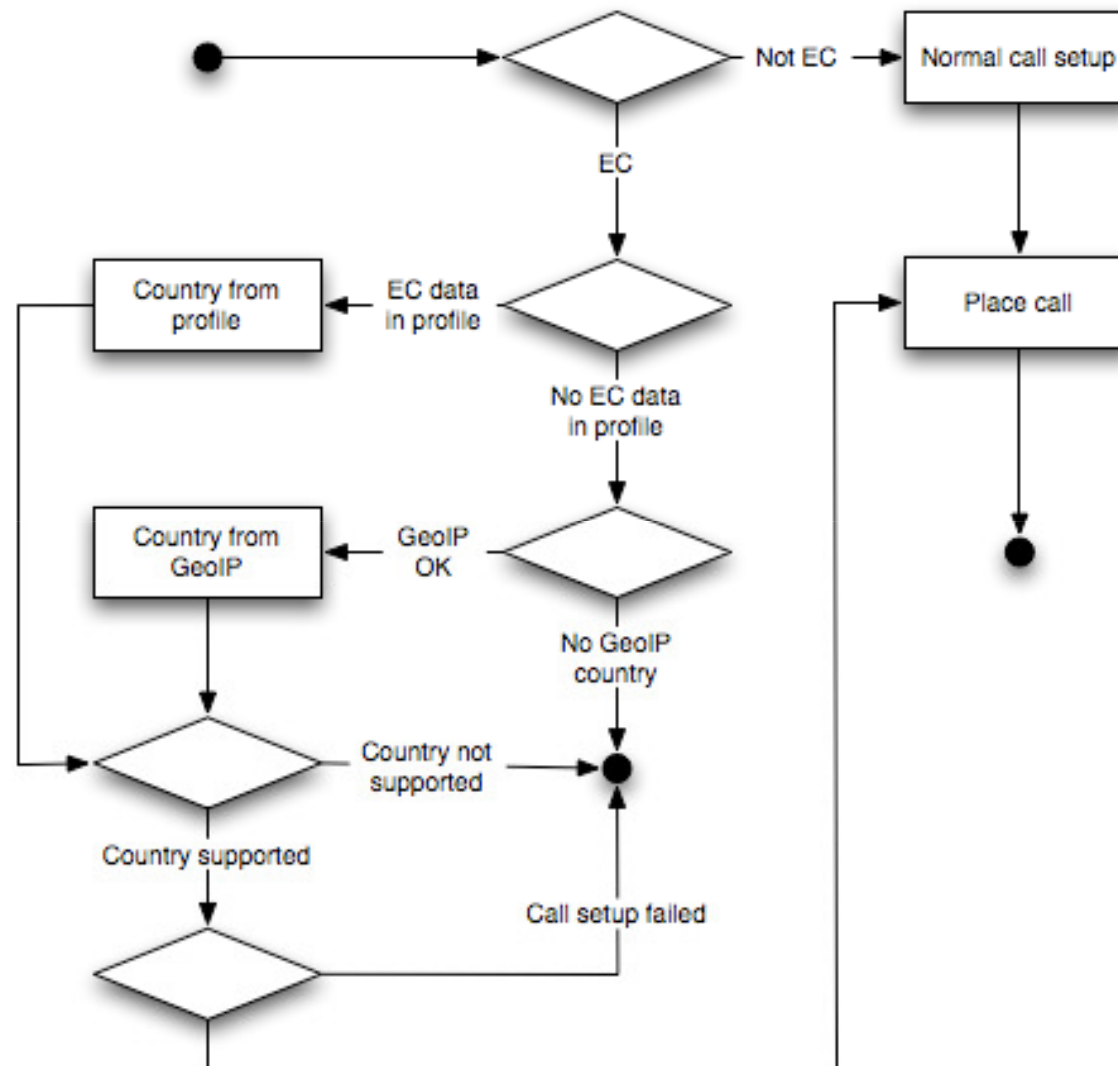

1. We are not a telephony replacement and we are not perceived as such by our customers
2. Technical and functional challenges to provide EC in a way that PSAPs are used to
3. Skype is a global company

We still try to do our best

The potential solution

1. Route emergency calls in select countries to spill-over PSAP numbers
2. It's a standard Skype Out call in most respects
3. Detailed location information is not passed, callback is not possible

Call flow

Thanks for listening
